

FUEL SYSTEM Art. 16 11126 PEUGEOT Speedfight 100cc

These systems have been especially studied and set for boosted engines, complete with all accessories required for fitting (see general catalogue).

MALOSSSI is a leading firm in the design and production of special fuel systems for motorbikes and scooters.

MALOSSSI systems are the outcome of thorough research and accurate drawings and calculations.

The intake manifolds, the rotary valves and the air intakes designed by MALOSSSI undergo efficiency and destructive tests to check their performances and reliability.

Carburettors are specifically customized for each vehicle according to the engine and air intakes characteristics, besides the overall calibration of the carburettor which concerns all the elements taking care of air-petrol mixture dosing for all power output speeds.

MALOSSSI produces special components for fuel systems with the purpose of supplying a product that perfectly meets the requirements of the most demanding user.

FITTING INSTRUCTIONS

After having accurately cleaned the working area, remove the air filter and the old carburettor, connect the coupling given with the kit to the manifold, and then fix the new carburettor to the coupling.

After this, fix the new starter device to the casing as showed in figure, using the bracket given with the kit.

Refit the original filter housing connecting it to your new Malossi carburettor, after having it thoroughly cleaned and dried internally and externally, including the filtering element. Before fitting, the latter should be moistened with Malossi oil 7,3. Then connect the relevant control drives, duly recording the wires and taking care of inverting the fitting direc-

tion of the coupling between carburettor and filter housing.

Connect the petrol tube to the carburettor and the lubricant tube, making sure that there are no blow-ups or obstacles to the flow of the fuel and the oil.

execute a 180°-turn
from original fitting
